Regarding the consultation on the waste shipment regulation

The Danish Recycle Industry recommends this consultation to result in a revision of the regulation on waste of shipment.

There is a significant need to strengthen The Single Market for waste by simplified procedures for cross-border transportations and reducing cost considerably. This need must be seen in relation to the regulations intention to support high environmental quality, which is all about supporting the transition to a circular economy. Trade with waste resources and the choice of the technologically best plant are crucial for a continued development in the environmental performance, economic growth and security of resources supply in the EU.

Over all the Danish Recycle Industry supports comments and recommendations written by the Danish Chamber of Commerce and delivered to the Commission to this consultation. Please look for specific comments and recommendations in the letter from Danish Chamber of Commerce.

Yours sincerely,

Lisbet Hagelund
